

}

Bài 1.

```
interface Mail {  
    void sendMail();  
    void log(); }  
}
```

```
class MailImpl implements Mail {
```

@Override

```
public void sendMail() {
```

```
System.out.println("Đang gửi mail..."); }
```

@Override

```
public void log() {
```

```
System.out.println("Đang ghi log..."); }
```

}

```

class Main {
    public static void main (String [] args)
    {
        Mailimps mail = new Mailimpl ();
        mail. senmail ();
        mail. log ();
    }
}

```

Bài 2.

```

interface Shape {
    double get Area ();
    double get Perimeter ();
    void draw (); }

class Rectangle implements Shape
{
    private width;
    private height;
    public Rectangle (double width, double height)
    {
        this. width = width;
        this. height = height; }
}

```

@ Override

```

public double get Area ()
{
    return width * height; }

```

① Override

```
public double getPerimeter()  
{ return 2 * (width + height); }
```

② Override

```
public void draw() {  
    System.out.println("đang vẽ HEN...");  
}  
public boolean isSquare()  
{ return width == height; }  
}
```

class Circle implements Shape {

private double radius;

public Circle (double radius) {

this.radius = radius; }

① Override

public double getArea()

{ return Math.PI * radius * radius; }

② Override

public double getPerimeter()

{ return 2 * Math.PI * radius; }

③ Override

public void draw() {

```
System.out.println("đang vẽ hình tròn ...");  
}
```

```
class Main {
```

```
public static void (String[] args)
```

```
{  
    Shape hen = new Rectangle(5, 10);
```

```
    Shape ht = new Circle(7);
```

```
    System.out.println(" --- HCN --- ");
```

```
    hen.draw();
```

```
    System.out.println(" diện tích : " + hen.getArea());
```

```
    System.out.println(" chu vi : " + hen.getPerimeter());
```

```
    if (((Rectangle) hen).isSquare()) {
```

```
        System.out.println(" là hình vuông. ");
```

```
    } else {
```

```
        System.out.println(" không phải hình vuông. ");  
    }
```

```
    System.out.println(" --- hình tròn --- ");
```

```
    ht.draw();
```

```
    System.out.println(" diện tích : %.2f", ht.getArea());
```

```
    System.out.println(" chu vi : %.2f",
```

```
        ht.getPerimeter());  
}
```

```
}
```

Bài 3.

```
interface Car {  
    String get Color();  
    double get Speed();  
    void accelerate();  
}  
class Bmw implements Car {  
    private String color;  
    private double speed;  
    public Bmw (String color, double speed)  
{  
    this.color = color;  
    this.speed = speed;  
}
```

@Override

```
    public void accelerate()  
{  
    this.speed += 20;  
    System.out.println("BMW");  
}
```

@Override

```
    public String get Color() { return this.color; }
```

@Override

```
    public double get Speed() { return this.speed; }
```

@Override

```
    public String toString() {  
    return "BMW [Màu: " + color + ", Tốc độ: " + speed + " ]";  
}
```

```

class Civic implements Car {
    private String color;
    private double Speed;
    public Civic (String Color, double Speed)
    {
        this.color = color;
        this.Speed = Speed;
    }

```

① Override

```

    public void accelerate () {
        this.Speed += 15;
        System.out.println ("Civic ");
    }

```

② Override

```

    public String getColor () { return this.color; }

```

③ Override

```

    public double getSpeed () { return this.Speed; }

```

④ Override

```

    public String toString () {
        return "Civic [màu: " + color + ", tốc độ: " + Speed + " ]";
    }
}

```
